Profile

Data Analyst who builds the whole analytics stack for a quick-commerce FMCG brand: pipelines, a governed Postgres warehouse, the P&L in SQL, Power BI and an LLM assistant that answers leadership's questions in plain English. Nearly four years in Python, SQL and Power BI, with a bias for solutions that ship and get used.

Experience

Data Analyst · *The Baker's Dozen* — Dec 2022 – Present

DATA PLATFORM & AI ASSISTANT

- Built **Birbal**, an ask-your-data assistant on the Claude API (Node, Vercel, Supabase Postgres) in 10 weeks: plain-English questions become read-only SQL, answered with the numbers and the query; 390 questions from 18 users so far.
- Security lives in the database, not the prompt: each question runs under the asker's scoped Postgres role.
- Audited 148 real questions and 346 logged SQL statements, built default query surfaces that removed each class of wrong answer, and added prompt caching plus a model router (cost per answer down 33%).
- Consolidated MySQL and Neon into one Supabase Postgres warehouse (80M rows, 53 GB, 242 versioned migrations).
- Rebuilt the Business Central ERP sync as a resumable OData pipeline (28 web services); ingest 17 GRN feeds from 9 partners, 17 payment-advice feeds, Unicommerce orders and Drive marketplace exports into idempotent, ledger-tracked tables.

FINANCE MODELLING & MIS

- Modelled the P&L in SQL from sales register to EBITDA (material cost, gross margin, yield loss, overhead allocation keys derived from the management MIS), with an absorption check proving every rupee of cost landed.
- Built a returns-capping provision for late partner credits, surfacing a net-sales overstatement **running into crores**.
- Shipped Management MIS (P&L to EBITDA, common-size, margin bridge) and Spends (spend vs sell-out) boards.
- Streamlined P&L preparation in Alteryx (**90%** faster); primary data contact through two due-diligence processes; led the Annual Operating Plan with scenario templates for outsourcing and pricing decisions.

ORDER-TO-CASH & OPERATIONS

- Built an order-to-cash bridge in Postgres (PO → invoice → GRN → credit memo) feeding a live fill-rate board.
- Traced **crores** of apparent short-credits to a GRN feed gap rather than real shortages, and a half-million-unit MIS gap to one platform billed through another's entity.
- Automated PO, GRN and Payment Advice extraction at **99% accuracy**; reporting that cut warehouse losses **20–25%**.

MARKETING & COMPETITIVE INTELLIGENCE

- Built a Meta and Google Ads pipeline into Postgres and Power BI; keyed channel spend (ads, offers, off-invoice) to SKUs so product-level margins carry their marketing cost.
- Built a Blinkit scraper and keyword rank tracker capturing pricing, availability and share-of-search at scale.

Data Analyst Intern · *MYBYK* — Sep – Dec 2022

- Analysed cycle utilisation and hub performance; reallocated fleet from weak stations to high-demand zones.
- Cohort analysis of subscription plans informed a pricing revision linked to a **35% increase** in footfall.

Skills

PROGRAMMING	Python, SQL, JavaScript, R
DATA & WAREHOUSE	PostgreSQL, BigQuery, Supabase, DuckDB, MySQL, pg_cron, data modelling, versioned SQL migrations
PIPELINES & APIS	GitHub Actions, Playwright, FastAPI, Vercel, Alteryx, Business Central OData, Unicommerce SOAP, Google Drive & Sheets API, Meta & Google Ads API
AI & LLM	Claude API, tool-use agents, prompt caching, Claude Code
VISUALISATION	Power BI, Tableau, React, D3.js, Chart.js, R Shiny, Streamlit
BUSINESS TOOLS	Excel, Google Sheets, Business Central ERP, Google Analytics

Projects

Quick-Commerce Shelf Monitor PLAYWRIGHT · BIGQUERY · DUCKDB · REACT Rank, ads, price and stock on 4 quick-commerce apps, every 3 hours.

India Card Monitor PYTHON · D3 RBI and NPCI payments data since 2011, auto-refreshed: card issuers and UPI apps.

GitHub Actions Monitor JAVASCRIPT Cross-repo CI health, flaky failures and compute spend in one static file.

File Merger Pro R SHINY Merge large Excel and CSV files in the browser, with de-duplication.

Growth Forecaster R SHINY Forecast a gross margin profile from configurable input levers.

Certification

Google Data Analytics Professional Certificate *Google · Coursera*
